

GOMILE IZ STAREJŠE ŽELEZNE DOBE POD POŠTELO III. GOMILA 14 IZ PIVOLE

Mira Strmčnik Gulič, Biba Teržan

Na področju med Razvanjem in Pivolo se je razprostiralo obsežno gomilno grobišče, za katerega se omenja, da je še v polpretekli dobi štelo okrog 70 gomil, danes pa so v rahlo valoviti, s polji posejani pokrajini razpoznavne v slabih obrisih le še maloštevilne. Prav vsled ogroženosti zaradi globokega oranja so leta 1989 med 3. in 11. majem potekala zaščitna arheološka izkopavanja ene izmed gomil pod vodstvom Mire Strmčnik Gulič z mariborskega Zavoda za varstvo naravne in kulturne dediščine. Gomila je ležala na njivski parceli 22/1 k. o. Pivola, lastnika Alojza Lorberja. Glede na topografski načrt gomil, ki ga je že leta 1910 naredil Paul Schlosser, je gomila označena s št. 14 (*sl. 1*).¹

Gomila je bila že zelo sploščena, saj je bila v višino ohranjena le še do 1,30 m ter je bila razpotegnjena v širino med 22 in 28 m. Na površini so ležali posamezni kamni, za katere se je med arheološkim izkopavanjem izkazalo, da so pripadali zelo poškodovani grobni kamri (*sl. 11*). Grobna kamra kvadratnega tlorisa, velikosti $4,50 \times 4,50$ m, je bila postavljena na izravnano rumenkasto-sivo ilovnato podlago. Kamniti zidovi, do 0,80 m debeline, so bili grajeni v suhozidni tehniki, a ohranjeni le še do višine 0,35–0,55 m (*sl. 12*). Grobna kamra se je po vsej verjetnosti sesula proti notranjosti, pri čemer so zidovi zdrsnili navzven, kar je razvidno iz lege kamnov (*sl. 12*). Pomenljivo se tudi zdi, da so v vogalih kamre ležali vsaj po en večji kamen oz. kamniti blok (*sl. 11; 14*), kar daje slutiti, da le-ti predstavljajo nek poseben konstrukcijski element. Stranice kamre so bili usmerjene sever-jug oz. vzhod-zahod z rahlim odklonom 5 stopinj proti zahodu, a so bile na posameznih mestih že močno poškodovane, zlasti na severozahodni strani. Tla kamre, ki so bila nagnjena nekoliko proti jugozahodu, so bila skrbno tlakovana s kamnitimi ploščami in kamni lomljenci (*sl. 12; 14*). Preko sredine tlaka je potekala vglobljena sled prečnega trama v dolžini 2,85 m (*sl. 13; 14*). Očitno je šlo za nek konstrukcijski element, ki kaže, da kamra ni bila grajena le iz kamna, temveč je morala imeti tudi leseno konstrukcijo.

Zaradi različnih posegov v gomilo, zlasti oranja in drugih poljskih opravil, verjetno pa tudi že

EARLY IRON AGE TUMULI OF POŠTELO III. TUMULUS 14 AT PIVOLA

Mira Strmčnik Gulič, Biba Teržan

The area between Razvanje and Pivola is the site of a large tumulus cemetery. In the late 19th/early 20th century roughly 70 tumuli have been recorded at the cemetery, of which today only few are discernible in the gently undulating terrain strewn with fields, and even those in vague outlines. It is this alarming situation, which is the consequence of continuous deep ploughing, that led to rescue excavations. Investigations of one of the discernible tumuli were thus conducted between 3 and 11 May and led by Mira Strmčnik Gulič from the Institute for the Protection of Cultural Heritage of Slovenia, Regional Office Maribor. The tumulus was located on the field on Lot No. 22/1, cadastral community Pivola, owned by Alojz Lorber. Based on the topographic plan of the tumuli drawn already in 1910 by Paul Schlosser, the tumulus was marked with No. 14 (*fig. 1*).¹

At the beginning of investigations, the tumulus was considerably flattened and surviving to the height of up to 1.30 m; the remains of the earthen mound were stretched across a 22–28 m wide surface. Individual stones were found on the surface, which the excavations showed to be the stones from the very damaged burial chamber (*fig. 11*). The chamber was square in plan, measuring 4.50×4.50 m, and constructed onto levelled yellowish-grey loamy bedding. The stone walls were up to 0.80 m thick, built in the drywall technique and surviving to the height of 0.35–0.55 m (*fig. 12*). The chamber probably collapsed in

Slika 11. Pivola, gomila 14. Pogled na kamnito grobljo grobne kamre s profilom po sredini, ki jasno kaže, da je bila gomila že pred arheološkim izkopavanjem izropana oz. poškodovana. V sredini slike so vidni veliki kamni južnega vogala kamre (Foto: M. Strmčnik Gulič).

Figure 11. Pivola, Tumulus 14. Stone remains of the burial chamber with a baulk of earth across the middle, the sides of which clearly show prior damage or robbing. Large stones of the south corner are visible in the centre of the photo (Photo: M. Strmčnik Gulič).

Slika 12. Pivola, gomila 14. Pogled na odprto grobno kamro, katere tla so tlakovana s kamnitimi ploščami in kamni lomljenci, po sredini pa poteka vglobitev za leseni tram (Foto: M. Strmčnik Gulič).

Figure 12. Pivola, Tumulus 14. Burial chamber after cleaning, with a floor of stone slabs and unworked stones, as well as bedding for a wooden beam across the middle (Photo: M. Strmčnik Gulič).

ropanja neznano kdaj, je bila notranjščina grobne kamre do tolike mere poškodovana, da je bila do 0,10 m debela plast žganine s prežganimi ostanki kosti in črepnjami razvlečena po vsej površini grobnice. Le na treh mestih so se nahajali izrazitejši skupki žganine in fragmentirane keramike (*sl. 14*), za katere se je izkazalo, da pripadajo trem velikim posodam s stožčastimi vratovi. Posode je namreč restavrator Stanko Gojkovič uspel v veliki meri sestaviti, tako da so v dobršni meri rekonstruirane (*Tab. 17: 1–2; 18: 4; sl. 15*). Poleg keramičnih posod so bile najdene tudi razmetane ostaline drugih grobnih pridatkov, in sicer orožja, konjske opreme, voza in nošnje.

Antropološka analiza preostanka sežganih kosti je pokazala, da je bila v gomili pokopana odrasla oseba.²

Slika 13. Pivola, gomila 14. Detajlni pogled na tlakovanie z vglobljeno sledjo prečnega trama (Foto: M. Strmčnik Gulič).

Figure 13. Pivola, Tumulus 14. Detail of the floor with the sunken bedding for a transverse beam (Photo: M. Strmčnik Gulič).

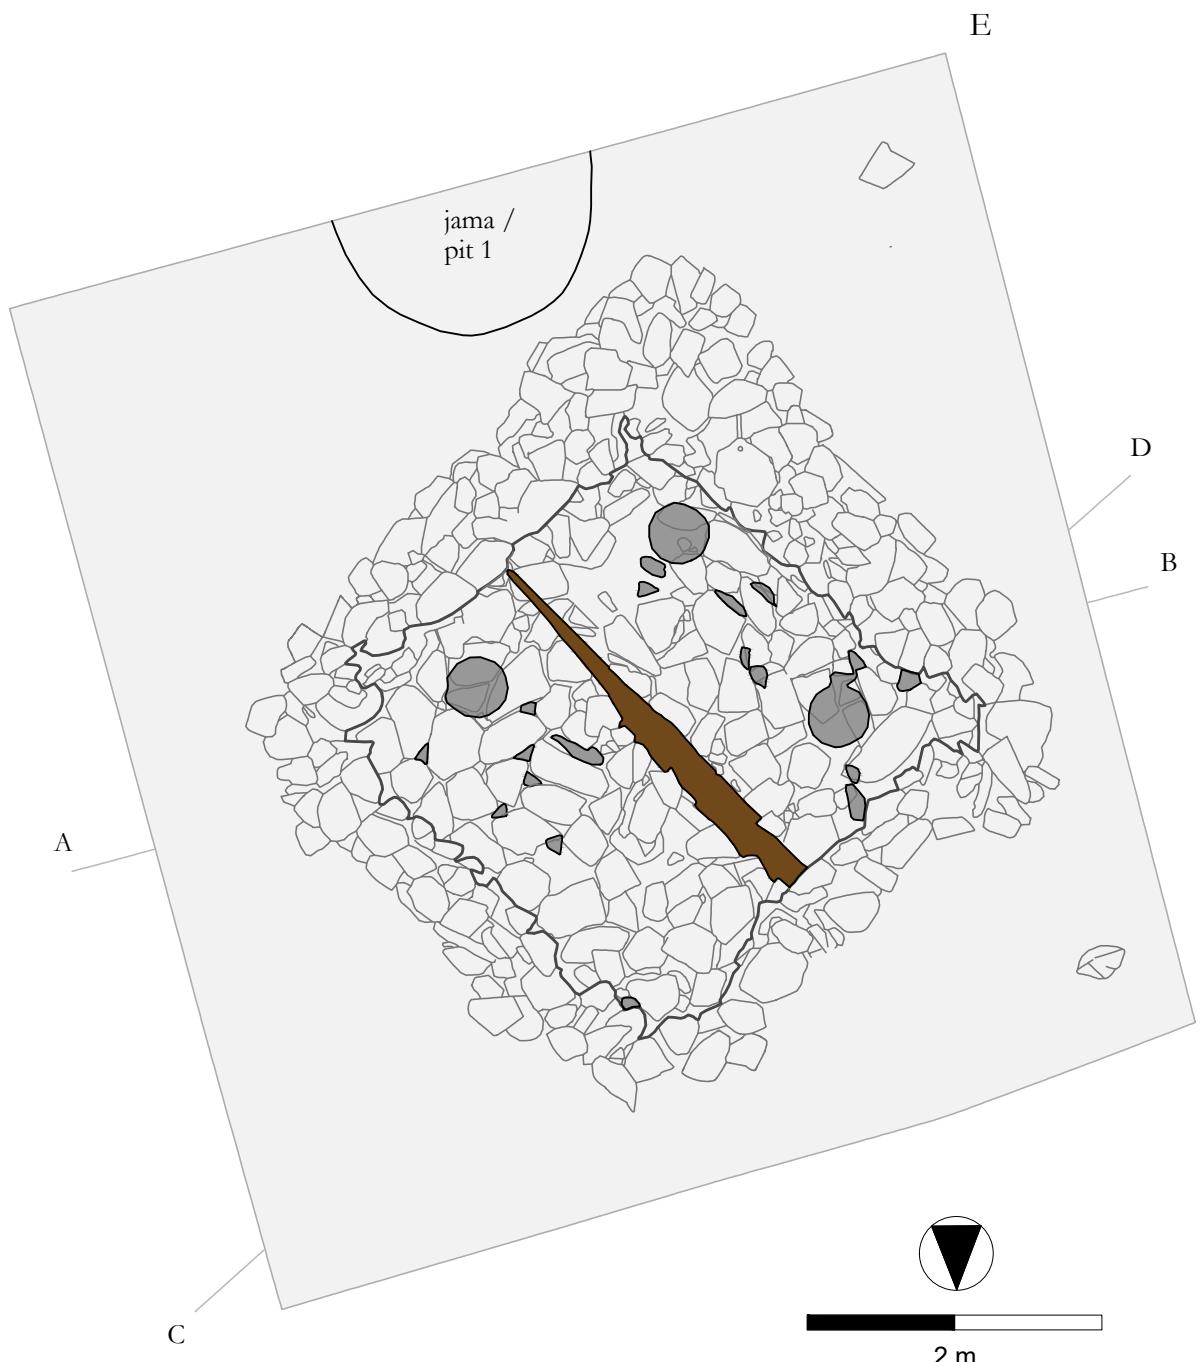

on itself, during which the stones of the walls slid outwards, which is suggested by the position of the stones (*fig. 12*). It was also noted, that at least one large stone or stone block stood in the corners (*figs. 11; 14*), which suggests corner reinforcement or some special constructional element for the wooden construction. The walls ran roughly in N–S, W–E directions resp., with a westward deviation of 5 degrees. They were heavily damaged, particularly in the NW. The floor was slightly tilted towards the SW and made up of stone slabs and unworked stones (*figs. 12; 14*). The bedding of a transverse beam in the length of 2.85 m ran across the centre of the floor (*figs. 13; 14*). This was presumably a constructional element forming part of a wooden construction of the burial chamber.

The multiple disturbances to the chamber, particularly ploughing and other agricultural activities, but probably also looting of an unknown date, caused great damage to the interior of the chamber. It also caused the up to 0.10 m thick layer of burnt debris, that included cremated remains and ceramic sherds, to be spread across the whole chamber. Only three discernible concentrations of burnt remains and fragmented pottery were recorded (*fig. 14*), which belonged to three large vessels with a conical neck. The sherds were restored by Stanko Gojkovič, who succeeded in largely reconstructing the vessels (*Pls. 17: 1–2; 18: 4; fig. 15*). The scattered remains of other grave goods included weapons, horse gear, a wagon and items of costume.

The anthropological analysis of these human bone fragments showed that buried individual was an adult.²

OPISI NAJDB [Tab. 16–18]³:

Grobna kamra

Tab. 16:

1. Bronasti razdelilni gumb s konično kapico in s štirimi stebrički na spodnji strani, poškodovan. Pr. gumba: 3,3 cm.
2. Bronasti razdelilni gumb s konično kapico in štirimi stebrički na spodnji strani. Ohranjeni so deli treh, četrti manjka. Pr. gumba: 2,9 cm.⁴

³ Risbe predmetov so delo M. Lubšina Tušek in D. Omana. Glej tu Urankar, Črešnar, Pril. 1: št. 11.

DESCRIPTION OF FINDS [Pls. 16–18]³:

Burial chamber

Pl. 16:

1. Bronze strap knob with a conical central boss and a four-part ring-footed loop on the underside, damaged. Diam.: 3.3 cm.
2. Bronze strap knob with a conical central boss and a four-part ring-footed loop on the underside. Parts of three pillars are preserved, the fourth one is missing. Diam.: 2.9 cm.⁴

³ Artefact drawings by M. Lubšina Tušek and D. Oman.

⁴ See here Urankar, Črešnar, App.: No. 11.

3. Bronasti razdelilni gumb s konično kapico in s štirimi stebrički na spodnji strani, tremi ohranjenimi. Pr. gumba: 3,5 cm.
4. Bronasti razdelilni gumb s konično kapico in enojno zanko na spodnji strani, poškodovan. Pr. gumba: 2,9 cm.
5. Bronast tulast nastavek ovalnega preseka, na spodnji strani povsem odprt, na zgornji pa je zaključek razširjen in odprtina zožena. Tik pod njegovo sredino je vodoravno skozi njega vstavljen bronasta prečka okroglega preseka. Oba konca prečke sta zglajena s površino. Pr.: 2,9 cm; pr. luknje: 1,1 cm; dol.: 12,2 cm; deb. prečke: 0,35 cm.
6. Bronasti ščitnik za iglo s profiliranim kroplastim zaključkom in bikoničnim spodnjim delom ter bronasta sploščena jagoda z navpično luknjico na sredini. Najverjetneje gre za del večlavec bronaste igle z zaključkom, saj v odprtini ščitnika ter v luknjici jagode še tičita preostanka odlomljene igle. Ohr. dol. ščitnika: 4,4 cm; deb. ščitnika: 0,6–1,2 cm, pr. jagode: 0,9 cm.
7. Bronasti obroček okroglega preseka, poškodovan. Pr.: 2,9 cm; deb.: 0,48 cm.
8. Odlomek bronaste zanke s ploščato skovanim zaključkom, v katerem tiči bronasta zakovica. Pr. zanke: 0,7 cm; dol.: 2 cm.
9. Bronasta zakovica oz. žebljiček s ploščato glavico, morda del ročaja meča (*Tab. 16: 13*). Pr. glavice: 0,9 cm, dol.: 1,1 cm.
10. Košček železnega predmeta s sledovi brona, pravokotnega preseka po velikosti približno enakega preseku železnega trna ročaja meča (*Tab. 16: 13*). Ohr. dol.: 2,75 cm; šir.: 0,88–0,67 cm.
11. Povsem korodiran in napihnjen košček železa s sledovi brona, ovalnega preseka, morda del ročaja meča, zagozde sekire ali železnih žval. Ohr. dol.: 3,3 cm; šir.: 1,2–0,96 cm.
12. Fragmentirana bimetalna tulasta sekira.⁵ Ustje bronastega tula je okroglega preseka in fino fasetirano, pod njim je ob strani veliko ušesce; spodnji del tula je nekoliko sploščen, ovalnega preseka in na vsako stran izvihan v obliki ribjega repa. Znotraj tula je ohranjen železni del rezila sekire in ob vsaki strani še po ena vzdolžna železna zagozda. Na obeh bočnih straneh tula je po pet navpično razporejenih odprtih pravokotne oblike, ki so deloma zapolnjene s prečnimi železnimi zagozdami. Rezilo sekire ni ohranjeno. Pr. ustja tula: 3,8 cm; vel. spodnjega dela tula: 3,9 × 2 cm; dol. tula: 7 cm; vel. odprtine na tulu: do 0,4 cm.
13. Fragmenti železnega meča z bronastim gobastim ročajnim glavičem⁶. Glavič je ovalne oblike in navpično
3. Bronze strap knob with a conical central boss and a four-part ring-footed loop on the underside, three of them are preserved. Diam.: 3.5 cm.
4. Bronze strap knob with a conical central boss and a single loop on the underside, damaged. Diam.: 2.9 cm.
5. Bronze, oval-sectioned socketed object, open at one end and partially closed at the other, widened end. Perpendicularly to the socket is a round-sectioned bar, inserted through it near the mid-point and smoothed with the exterior socket surface at both ends. Diam.: 2.9 cm; hole diam.: 1.1 cm; l.: 12.2 cm; bar th.: 0.35 cm.
6. Bronze pin guard with a moulded globular terminal with horizontal grooves and a biconical body, as well as a flat globular knob of bronze with a hole through the centre. They most likely represent parts of a multi-knobbed pin with its guard, as the hole in the knob and the opening of the guard hold the broken off remains of the pin. Surv. l. of the guard: 4.4 cm; guard th.: 0.6–1.2 cm, knob diam.: 0.9 cm.
7. Bronze round-sectioned ring, damaged. Diam.: 2.9 cm; th.: 0.48 cm.
8. Fragment of a bronze loop with a flattened end that holds a bronze rivet. Loop diam.: 0.7 cm; l.: 2 cm.
9. Flat-headed bronze rivet or nail, possibly part of a sword hilt (*Pl. 16: 13*). Head diam.: 0.9 cm, l.: 1.1 cm.
10. Piece of an iron object with traces of bronze, resembling the tang of an iron sword hilt in both rectangular section and size (*Pl. 16: 13*). Surv. l.: 2.75 cm; w.: 0.88–0.67 cm.
11. Heavily corroded and swollen piece of iron with traces of bronze, oval in section and possibly representing a fragment of either a sword hilt, an axe wedge or an iron bit. Surv. l.: 3.3 cm; w.: 1.2–0.96 cm.
12. Fragmented bimetal socketed axe.⁵ Mouth is round in section, with a finely faceted collar and a large loop below it. Socket base is flattened and oval in section, shoulders are sloping. Socket interior holds the iron tang of the blade, held in place on both sides by flat longitudinal iron wedges. Running along each side of the socket are five rectangular holes, through which protrude transverse iron wedges. Axe blade missing. Socket mouth diam.: 3.8 cm; socket base size: 3.9 × 2 cm; socket l.: 7 cm; socket hole size: up to 0.4 cm.
13. Fragments of an iron sword with an oval mushroom-shaped pommel⁶. The pommel has a vertical hole through the middle, which holds the remains of the iron tang. The blade survives in fragments.

sredinsko predrt. V predrtini je ohranjen železni trn ročaja meča, rezilo z rebrom po sredini pa je ohranjeno le v fragmentih. Deb. glaviča na vrhu: $2,1 \times 1,5$ cm; deb. glaviča pri dnu: $3,8 \times 2,3$ cm, dol. glaviča: 2,5 cm; šir. trna na notranji strani: 0,85–0,63 cm; šir. trna na zunanjji strani: 0,54–0,57 cm; ohr. dol. odl. rezila meča: 5,8, 5,3 in 5 cm.

Tab. 17:

1. Posoda s stožčastim vratom, delno rekonstruirana, iz zelo finozrnate lončarske gline, nepopolno oksidacijsko žgana, v končni fazi redukcijsko. Površina je temno siva, zglajena in grafitirana. Vrat in rame sta okrašena z geometrijskimi motivi iz meandrov, izvedenimi z belo snovjo, verjetno iz kositra. Na ramenu posode je ohranjen del stožčaste bradavice. Pr. največjega oboda: 61 cm, ohranjena viš. posode 45 cm; deb.: 0,45–0,55 cm (*sl. 15A*).
2. Posoda s stožčastim vratom, delno rekonstruirana, iz zelo finozrnate lončarske gline, nepopolno oksidacijsko žgana, v končni fazi redukcijsko. Površina je temno sive barve, zglajena in svetlikajoča, grafitirana. Vrat in rame sta okrašena z geometrijskimi motivi, izvedenimi z belo snovjo, verjetno iz kositra. Na ramenu posode je ohranjen nastavek za stožčasto bradavico. Pr. najširšega oboda: 59 cm; ohr. viš.: 30,7 cm; deb.: 0,46–0,55 cm (*sl. 15B*).

Tab. 18:

1. Odlomek v ognju poškodovane skodelice ali vrčka z bledo rjavo in temno sivo razpokano površino. Vel.: $5,9 \times 4,8$ cm; deb.: 0,4–0,5 cm.
2. Odlomek ustja velike posode s fasetiranim notranjim robom ustja, iz drobnozrnate lončarske gline, nepopolno oksidacijsko žgane, v končni fazi redukcijsko. Površina je gladka, na notranji strani rdečerjave in sive barve, na zunanjji pa temno sive barve, s sledovi glajenja. Pr. ustja: 30,2 cm; deb.: 0,8 cm.
3. Posoda s stožčastim vratom, okrašeni odlomki, iz zelo finozrnate lončarske gline, nepopolno oksidacijsko žgana, v končni fazi redukcijsko. Površina je gladka, temno siva, delno pa svetlikajoča, s sledovi glajenja in grafitnega premaza. Posoda je okrašena z visečimi kanelurami v motivu girland in z vtisnjениmi pikami ter rozetami, sestavljenimi iz vtisnjenega krožca, obdanega z vtisnjeniimi pikami. Pr. najširšega oboda: 42,2 cm; ohr. viš.: 9,4 cm; deb.: 5,4 cm.
4. Posoda s stožčastim vratom, delno rekonstruirana, iz zelo finozrnate lončarske gline, nepopolno oksidacijsko žgana, v končni fazi redukcijsko. Površina je gladka, svetlikajoča, s sledovi glajenja in grafitnega premaza. Vrat in rame sta okrašena z geometrijskimi motivi, izvedenimi z belo snovjo, verjetno iz kositra.

Pommel th. at the top: 2.1×1.5 cm; pommel th. at the base: 3.8×2.3 cm, pommel l.: 2.5 cm; interior tang w.: 0.85–0.63 cm; exterior tang w.: 0.54–0.57 cm; l. of surv. blade fragments: 5.8, 5.3 and 5 cm.

Pl. 17:

1. Vessel with a conical neck, partially reconstructed, made of a very fine-grained fabric and fired in an oxidising atmosphere, but incompletely oxidised and finished in a reducing atmosphere. Surface is dark grey, burnished and graphite-coated. Neck and shoulder bear geometric motifs composed of meanders, which are made in white, probably with tin. Part of a conical knob survives on the shoulder. Max. diam.: 61 cm, surv. h. 45 cm; wall th.: 0.45–0.55 cm (*fig. 15A*).
2. Vessel with a conical neck, partially reconstructed, made of a very fine-grained fabric and fired in an oxidising atmosphere, but incompletely oxidised and finished in a reducing atmosphere. Surface is dark grey, burnished and graphite-coated. Neck and shoulder bear geometric motifs composed of meanders, which are made in white, probably with tin. Stub of a conical knob survives on the shoulder. Max. diam: 59 cm; surv. h.: 30.7 cm; wall th.: 0.46–0.55 cm (*fig. 15B*).

Pl. 18:

1. Fragment of a fire-damaged cup or small jug with a cracked pale brown and dark grey surface. Size: 5.9×4.8 cm; th.: 0.4–0.5 cm.
2. Rim fragment of a large vessel with a faceted interior rim, made of a medium-grained fabric and fired in an oxidising atmosphere, but incompletely oxidised and finished in a reducing atmosphere. Surface is smooth, red-brown and grey in the interior and dark grey in the exterior, with traces of burnishing. Rim diam.: 30.2 cm; th.: 0.8 cm.
3. Decorated fragments of a vessel, made of a very fine-grained fabric and fired in an oxidising atmosphere, but incompletely oxidised and finished in a reducing atmosphere. Surface is smooth, dark grey with traces of burnishing and a graphite coat. Decoration consists of garlands of grooves and impressed dots, as well as rosettes of a large impressed dot surrounded with smaller impressed dots. Max. diam.: 42.2 cm; surv. h.: 9.4 cm; wall th.: 5.4 cm.
4. Vessel with a conical neck, partially reconstructed, made of a very fine-grained fabric and fired in an oxidising atmosphere, but incompletely oxidised and finished in a reducing atmosphere. Surface is smooth, shiny, with traces of burnishing and a graphite coat.

Na ramenu posode je ohranjen nastavek za stožčasto bradavico. Pr. najširšega oboda: 61,8 cm; ohr. viš.: 19 cm; deb.: 0,43–0,46 cm (*sl. 15C*).

Neck and shoulder bear geometric motifs composed of meanders, which are made either in white, probably with tin. Stub of a conical knob survives on the shoulder. Max. diam.: 61.8 cm; surv. h.: 19 cm; wall th.: 0.43–0.46 cm (*fig. 15C*).
